

10X an innovative gambling and trading game based on the Ethereum blockchain announce its ICO.

Saturday, 14th August 2017, for immediate release.

Bangkok, Thailand:

10X is the first game of its kind to connect both gambling and trading in the same game play.

10X is an innovative take on the Lottery game, but adapted to the blockchain technology for an optimum security and with some unique innovations that makes it a game of a new kind.

You can bet some Ether on your favorite number between 1 to 9 and if it is the number drawn by the blockchain, **you win 10 times what you bet.**

If you loose, **you receive 10 times your bet in 10X tokens.** You can then trade and continue the game in the exchanges. You have nothing to loose.

In order to fund the house, **10X** will do an ICO where we will offer the **10X** tokens at a bargain price in exchange of Ethers. The **10X** ICO will open on the **20th of August, 2017 at UTC 0:00.** It will last 10 days and end on the 30th of August, 2017 at UTC 0:00.

The participation instructions are posted on the **10X** official website at <http://10x.bz>.

A limited supply of **10,000,000 tokens** will be distributed at the ICO (40,000,000 total). More can be minted if necessary, we will monitor how the token evolves and insure that it goes to the ultimate goal: **to reach 0.10 Ether for 1 token.**

10X has been designed to be the most adapted and efficient token to fit into the blockchain. It is a limited state machine that can switch alone into 5 game modes depending on its reserves and its success.

No need to explain how much the lottery game is popular all over the world and specially in Asia where the **10X** game has been conceived.

The goal of the game is to reach 1 tenth of the Ethereum value. Because it delivers 10 tokens for each loss, every time someone play and loose, the value of the **10X** token is driven into that direction like a magnet, it is genetic.

*"10X is not another futarchy app that will never work. **10X** is a viral community smart contract that is both a fun game to play with a 10 time bet reward, but also the first game to really explore the new possibilities of the blockchain technology and the Ethereum smart contracts by delivering shares of its value to the ones who are losing. Each player is a potential investor. It is a win-win game for both the tokens holders and the game players. All members of the 10X community are in the same boat, and we only need to attract as many players as possible from all over the world to see the value of the 10X token growing organically. The way this contract is working makes it a game of a new kind."*

The website located at <http://10x.bz> monitors all the activity and list the wins and lost. It also displays the current state of the contract, it is translated in English, Chinese, Russian, Spanish, Portuguese, Japanese, Thai and French to be as international as possible.

This contract is also the **most secure game published in the blockchain to date**, with a bulletproof – or miner proof – random generation that does not rely on any external resource. No connection to Oraclize is necessary, the contract leaves 100% inside the blockchain .

The contract also adds tarpitting to avoid spam and bots. Automatic blacklisting of addresses acting suspiciously, and an additional security that disable the owner access to the contract in case of the contract is hacked or stolen. Security is our number one priority.

The owner of the contract is actively supporting the project days and night though Discord App and will be more than happy to answer to any question you may have at <https://discord.gg/Pks5wh9>
